

SUSTAINABLE AGRICULTURE GUIDING PRINCIPLES (SAGP)

A healthy agricultural supply chain is essential to the well-being of the communities in which we operate, and is critical to the success of our business. Our approach to sustainable agriculture is founded on principles to protect the environment, uphold workplace rights and help build more sustainable communities. To meet the expectations of our consumers, customers, other stakeholders and enable the continued growth of the Company, it is imperative we maintain a secure, sustainable supply of the agricultural ingredients that define our brands.

The Coca-Cola Company has made a commitment to sustainably source 100% of our priority agricultural ingredients by 2020. These priority ingredients are Sweeteners (Cane Sugar, Beet Sugar, Corn/High-Fructose Starch Syrup, Stevia); Juices (Orange, Lemon, Apple, Mango and Grape); and, Coffee, Tea, Soy, Palm Oil and Pulp & Paper. The Coca-Cola Company Sustainable Agriculture Guiding Principles and Criteria (SAGP) establish the framework for defining what ‘sustainable sourcing’ means to us, and lays out our expectations for our supply chain.
